Get on therapy

RxPx Accelerate

Coordinated therapy starts for patients, HCPs and sites.

Accelerate connects HCP and treatment-site readiness with patient onboarding, access navigation and coordinated next steps, helping reduce friction on the path to therapy.

Therapy start requires more than patient enrollment.

HCP onboarding, site readiness, insurance, testing and documentation often span disconnected workflows. Accelerate helps patients, providers and support teams move toward initiation together.

Common therapy-start barriers

- HCP and treatment-site onboarding requirements
- Patient enrollment and access steps across teams
- Testing, documentation and REMS readiness gaps
- Limited visibility into status and next actions

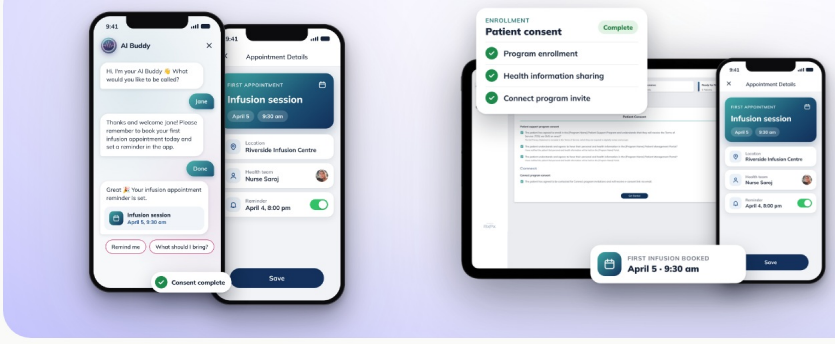

How Accelerate helps

- HCP and site readiness workflows, as configured
- Guided patient onboarding and access navigation
- Testing, documentation and initiation coordination
- Shared next steps and patient-status updates

Reported therapy-initiation result

13×

faster time to therapy, compared with industry benchmarks*

*13× is a reported RxPx result compared with industry benchmarks; results may vary by program, therapy and population.

How Accelerate delivers.

One connected path from prescription to first dose.

01 Early · HCP and site

Prepare HCPs and sites

Provider onboarding, site education and readiness, including REMS.

02 Patient and access

Onboard patients

Enrollment, insurance, education and required testing.

03 Through therapy start

Coordinate initiation

Everyone connected around status, next steps and follow-up.

Configurable by therapy. HCP, site and patient workflows can be tailored to program requirements and delivery models.

A digital start for every patient.

From prescription to first dose.

Enrollment and e-prescription

With e-prescription integration, where available.

Automated pre-screening

Pre-screening and program onboarding, as configured.

Conversational onboarding

Consent, terms and baseline captured in one flow.

Welcome kit

Offered to the patient, with delivery facilitated.

Preparation guidance

First-dose preparation, dosing reminders and FAQs.

First-dose check-in

Nurse call scheduled automatically, as configured.

Getting started on therapy should feel clear, coordinated and supported, not like navigating the process alone.

Help patients and HCPs get ready to start therapy.

Configured to your brand, treatment sites and patients.
